

Sample Essay on Pollution in 100-150 Words

Pollution is the major factor playing in the imbalance of the environment. Climate change, global warming, and many other are because of pollution. Unwanted substances when released into the environment affect environment the most. There are many ways we can control pollution, it all starts with a little effort. Taking public transport or carpooling will reduce air pollution by up to 50%. Another way you can contribute towards saving the environment is by switching to E-products. Instead of buying cars that run on fuels switch to the ones that run on electricity. Government should pass more strict rules and regulations. It is high time to come together and end this fight against pollution for the betterment of future generations.

Sample Essay on Pollution in 250- 300 Words

The biggest threat planet earth is facing is pollution. Unwanted substances are released into an environment and leave a negative impact. There are four types of pollution air, water, land, and noise. Pollution affects the quality of life more than any human can imagine. Due to air pollution, even teenage kids have developed various respiratory diseases. Water pollution has led to diseases in children. The waste we humans dump on the land or chemical fertilisers which are put on the land for agricultural purposes cause land/ soil pollution. If the soil quality gets deteriorated due to such practices, the soil will become infertile and no crops could be grown in future. The government has launched various schemes over the years to fight pollution but individual efforts can also play a vital role. Start by replacing plastic bags for shopping with cloth bags, stop littering on roads and stop wasting water are some of the basic things to start with that can lead to big changes in the environment.

Sample Essay on Pollution in 300-350 Words

One of the most critical threats faced by our planet in the present day scenario, Environmental pollution is a global issue affecting people around the world. It is occurring in different forms, whether by affecting the air we breathe or the water resources we utilise for several purposes. Air pollution came into being with an increase in the level of carbon dioxide, with the increase in pollutants which are contaminating the air and causing breathing discomfort as well as skin diseases to human beings. Talking about the other aspect, there is no life without water. In the name of industrial development, religious practices and various other reasons, the water bodies are getting polluted thus becoming unsafe for drinking or for any other use. Due to air pollution, diseases that can occur to human beings are asthma, various skin diseases, cancer, etc. Therefore, it is the essential need of the hour to take serious steps to reduce the pollution to its core.

At personal level, we can minimise environment pollution by taking public transport or carpools to reduce vehicular smoke, avoiding firecrackers at festivals and celebrations can also cut down on air and noise pollution, not using the fertilisers and pesticides which can cause both water

and soil pollution, and switching over to organic farming. The government can also bring strict rules and regulation to lessen industrial pollution. To sum up, any type of pollution is harmful to the environment with serious consequences like global warming, uneven climatic changes, etc. The innocent lives of animals are lost due to our greediness and illegal human activities. The time has come to join our hands and work towards preserving and protecting the environment for the present as well as future generations.
