Child Psychology

Child Psychology is an important branch of psychology that focuses on the mind and behaviour of children from parental development through adolescence. Child psychology deals not only with the growth of children physically but also with their mental, emotional and social development as well.

Development

Development refers to the biological and psychological changes that occur in human beings between conception and the end of adolescence, as the individual progresses from dependency to increasing autonomy. It may also be defined as a process of internal features of a human being in collaboration with external or environmental features.

- Development is a continuous process-It does not occur in spurts. Growth continues from conception until an individual reaches his maturity.
- It follows a pattern or sequence-Every species, whether animal or human follows a pattern of growth.
• General to specific-It moves from generalized to localized behaviour. Growth occurs from large muscle movements to more refined (smaller) muscle movements.

• Different rates of individual growth and development-Neither all the parts of the body grow at the same time nor do the mental abilities of a child develop fully. They attain maturity level at a different pace.

• Development is a complex phenomenon-All the aspects of growth are closely interrelated to each other.

**Intelligence**

According to the subject Child Development and Pedagogy, Intelligence is the ability to learn about, learn from, understand and interact with one’s environment. It includes various specific abilities such as-

- Adaptability to a new environment.
- Capacity for reason and abstract thought.
- Ability to comprehend relationships.
- Capacity for original and productive thought.
- Ability to evaluate and judge.

**Using Multiple Intelligences in the Classrooms**

The theory states that all these are needed to productively function in society and teachers should structure the presentation of material in a style that could engage most or all of the intelligence.

**The Principle of Child Development**

With the help of given child development and pedagogy principles, we can easily identify how children are developing and at which stage they are.

1. **Principle of Cephalo-Caudal**

   - Development proceeds from head to toe
   - 6 to 12 months infants
   - Coordination of arms before leg

2. **Principle of Proximal-Distal**

   - Centre to outward
   - The spinal cord develops first than the outer parts of the body.

3. **Principle of Simple to Complex**

   - Skills related to mental or intellectual abilities and skills related to verbal comprehension are used by the child to solve the problem.
   - For example, if the child must learn to classify the object so the kite and airplane may be the same for her because they both fly in the sky.
• But in the later stage of learning, they will be able to understand more complex similarities and differences between these objects.

4. Principle of Continuous Process

• Addition or accumulation or deposition in skills takes place on a continuous basis.
• For example, in language development a child starts from babbling then proceeds further in more accomplishment of the language.

5. Principle of General to Specific

• Firstly gross/large muscles motor movement development takes place then moving forward to more refined smaller/ fine motor muscles movements.

6. Principle of Individual Rates of Growth and Development

• Everyone is different, that’s why their rates too.
• That’s why there should be no such notion as the average child because everyone proceeds according to their rates. So, we can’t compare two children on the basis of their intellectual development or one child’s progress with another.
• Its rates of development are also not uniform for all children.

Types of Children Strategies for Learning

Types of Children Strategies for Learning come under Child Development and Pedagogy. It includes strategies like:

• No School Bag: As in the initial years of schooling children feel hesitant to go to school because of the new environment and because of heavy bags. Nowadays, many schools adopted the policy of no school bags. This is basically done in order to attract kids to school on a regular basis and develop the learning of regularity among kids.
• Organising a Competition of Reading and Writing: This strategy of learning is helpful for 3rd grade to 5th-grade students because proper development of reading and writing skills. This helps in developing the learning of reading and writing.
• Organising Play Competition: This strategy of learning is basically part of a co-curricular activity when the child gets exposure to know about the outside world.
• Daily sharing of News: The teacher in order to develop a habit of listening to news and reading newspapers from a small age only.
• Organising Outdoor Activities: Teachers can organise small trips or picnics to museums, parks, etc.
**Autocratic Teaching Strategy**

This strategy uses traditional methods of teaching. In this method, the teacher has full control over teaching and students are not allowed to act freely. This strategy is of four types:

1. **Storytelling Method**: Under this method, the teacher delivers the content in a story form to the students. This method increases the vocabulary of the student and enhances their vocabulary.

2. **Lecture Method**: The lecture method is the oldest and one-way communication method of teaching and is helpful in developing the cognitive and affective domains of the child.

3. **Demonstration method**: This method is useful in teaching a practical subject where the content can be understood by only showing.

4. **Tutorial Method**: Under this method, a class is divided into groups according to the capacities of students. Each group is handled by different teachers.

**Democratic Teaching Strategy**

Democratic Teaching Strategy is a vital part of Child Development and Pedagogy notes for CTET. Under this strategy, a child is free to express their views in front of the teacher and maximum interaction between teachers takes place. Here the teacher works as a guide or instructor. Six types of methods are covered under this strategy:

1. **Discussion Method**: Under this method, an oral conversation about a topic takes place between students and teachers. The discussion method develops the thinking and communication power which results in the development of a higher level of the cognitive and affective domain. This method is suited to all subject teaching except maths, art, music, and dance.

2. **Heuristic Method**: Under this method, a teacher raises a problem in front of the student and also guides him. The students are able to solve the problem after gaining knowledge through self-study, self-learning, through investigation and research.

3. **Discovery Method**: Under this method, students find the solution to their problems from their own surrounding environment.

4. **Project method**: Under this method, a project related to real-life experiences is assigned to students by making a group. Students learn and solve real-life problems with each other’s cooperation.

5. **Role-playing Method**: Under this method roles are assigned to students and students are allowed to play those roles.
6. Brainstorming: It is a creative method of teaching under which a number of ideas are generated for the solution of a specific problem.

**Child Development & Pedagogy Well-Versed Syllabus**

After knowing and getting familiar with the exam pattern, another CTET preparation tip that aspirants must adhere to is getting familiar with the correct syllabus and marking scheme of the CTET exam. Candidates must know that the CTET Syllabus is different for Paper – I & Paper-II. Hence, aspirants must try to cover the complete CTET syllabus.
